Nintendo®

WARNING

This instruction manual is for use only by authorized distributors of Nintendo of America Inc., coin operated video arcade games who have been licensed to install replacement parts and components in Nintendo arcade games pursuant to Nintendo-Pak™ license agreements.

WARNING

If the replacement parts and components in this Nintendo-Pak™ are not installed exactly as instructed herein, there may be radio frequency interference created in violation of F.C.C. class A standards.

WARNING

This equipment generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instruction manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a class A computing device pursuant to subpart J of part 15 of F.C.C. rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference; in which case, the user at his own expense will be required to take whatever measures may be required to correct the interference.

WARNING

Use of non-Nintendo parts or modifications to your Nintendo-Pak™ parts and components may adversely affect the safety of your game, and may cause injury to your players.

III. List of Tools Needed

Flat (standard) screwdriver

Phillips screwdriver

7mm nut driver

8mm nut driver

10mm nut driver

1/4" or 6.5mm drill bit

15/64 or 5.5mm drill bit

Electric reversing drill

Phillips bit (for drill)

Staple gun

Paper stapler

Lacquer thinner

Denatured alcohol or other cleaner

Note: Many steps require the use of a phillips screwdriver and having a phillips screwdriver bit for your drill will greatly speed up these steps.

IV. Step-by-step instructions

1. Exchange marquee/header (see illustration 1-1)
 - A. Remove four (4) top trim screws
 - B. Exchange marquee plexiglass
 - C. Replace top trim and four (4) top trim screws

2. Remove old control panel and front screen (see illustration 1-2)
 - A. Undo control panel holddown clamps
 - B. Disconnect harness and remove control panel
 - C. Remove front screen by sliding back front screen clamp (access from back door)

These steps are for Donkey Kong and Donkey Kong Junior ONLY.
Note: If replacing Popeye, proceed to step 6.

3. Remove instruction label (see illustration 1-3)
Note: For Donkey Kong, Donkey Kong Jr. ONLY
 - A. Spray label with lacquer thinner
 - B. Wait 15 minutes and remove with putty knife
 - C. Clean area with cloth and lacquer thinner

4. Replace side decal (see illustration 1-4)
Note: For Donkey Kong and Donkey Kong Junior only
 - A. Remove all carriage bolts.
 - B. Remove old decals.

These steps are for Donkey Kong and Donkey Kong Junior ONLY.

- C. Clean side panel with alcohol and install new Donkey Kong 3 side decal.

Note: Decal is placed 2-1/2 inches from top and in center of side panel.

(See illustration 1-5)

SEE DECAL APPLICATION SHEET, PAGE 22.

- D. Replace all carriage bolts. (See illustration 1-6)

IMPORTANT: Be sure that monitor ground wire is connected to one of the locations shown.

These steps are for Donkey Kong and Donkey Kong Jr. ONLY

5. Installation of FCC shield cage (see illustration 1-7)
- A. Unscrew wing nuts and remove P.C. Board assembly and all wire harnesses **EXCEPT** three (3) harness connections to coin door (2 pin counter, 3 pin coin, 5 pin service)
 - B. Remove P.C. Board mounting brackets

- C. If P.C. Board wood shelf has slots made from square stock wood, remove these (see illustration 1-8)

These steps are for Donkey Kong and Donkey Kong Jr. ONLY

- D. Install new FCC shield cage so it is flush with rear of wood shelf and fasten with nine (9) screws provided. **IMPORTANT! On lower left corner install ground harness and connect the other end to the mounting bolt on the power supply as shown.** (see illustration 1-9 & 1-10)

These steps are for Popeye ONLY

6. Replacement of side decal and vertical positioning of monitor (see illustration 2-1)

- A. Remove both large and small blind cardboard.

These steps are for Popeye ONLY.

- B. Disconnect all monitor connections and mounting screws and remove monitor (see illustration 2-2).
Note: Monitor ground wire will be reconnected in Step K.
- C. Remove all carriage bolts and monitor side panel supports (see illustration 2-2).
- D. If your game does not have 5 holes in each side panel, use the template provided to drill upper two holes (see illustration 2-3).

- E. Remove old side decals and clean side panels with alcohol.
- F. Install new side decals 2-1/2 inches from top and in center of side panel (see illustration 2-4).

SEE DECAL APPLICATION SHEET PAGE 22

These steps are for Popeye ONLY

- G. **IMPORTANT:** Check to see if your game has the lower monitor support installed. If it does, skip step H and proceed to step I (see illustration 2-5).

- H. Install lower monitor support by drilling three (3) 15/64 (5.5m) holes and mounting support with three (3) M5 machine screws and cap nuts (see illustration 2-6).

These steps are for Popeye ONLY

- I. Place monitor back into game in vertical position.
Note: Monitor frame rests in front of lower monitor support (see illustration 2-7).

- J. Install all side panel carriage bolts.
K. Install upper monitor support L brackets and monitor support bar. (Note: Monitor support bar provided in PAK AC.) **IMPORTANT: RECONNECT MONITOR GROUND IN POSITION SHOWN IN DETAIL** (see illustration 2-8).

These steps are for Popeye ONLY

- L. Install monitor mounting machine screws (see illustration 2-9).

- M. Install new small and large blind cardboard, being sure to staple where shown (see illustration 2-10).

These steps are for Popeye ONLY

7. If you are replacing a Popeye game, remove old power supply transformer assembly (see illustration 2-11 & 2-12).

- A. Disconnect connector from switch plate
- B. Disconnect both plugs from monitor and lamp
- C. Disconnect ground harness connections
- D. Disconnect both power harness connections

IMPORTANT: Take off old short harness connectors and replace with new short harness connectors provided. SEE DETAIL (illustration 2-11).

- E. Remove four (4) wing nuts and take out old power assembly.
- F. Replace with new Donkey Kong 3 power supply assembly and tighten wing nuts.

Note: Bolts for wing nuts may push through bottom of game during mounting of new power supply unit. If this happens, simply push them back up when power supply assembly is in place

- G. Reconnect Steps A, B & C being careful to get a good connection on Step C. Ground harnesses.

8. Replace fuse with 5 AMP fuse and place 5 AMP fuse label in position shown (see illustration 2-11).

This step is for Popeye only.

9. Remove old Popeye P.C. Board and FCC cover assemble (see illustration 2-13).

These are steps for Donkey Kong, Donkey Kong Junior and Popeye.

10. Install new Donkey Kong 3 P.C. Boards and new FCC cage cover assemble, and connect short harness to P.C. Board. **IMPORTANT: Do not screw on cover until final adjustments are completed** (see illustration 3-1).

This step is for Popeye, Donkey Kong and Donkey Kong Jr.

11. Connect main harness assembly (see illustration 3-2)

Note: For Donkey Kong and Donkey Kong Junior, install new wire harness (steps A-G). For Popeye, reconnect old harness (steps D, E and G).

- A. Connect 2 pin, 3 pin, 4 pin coin door harnesses to main harness
(Note: Harnesses are different for Popeye, Donkey Kong, and Donkey Kong Jr.)
- B. Fasten control panel connectors to wire tie approximately 5" from connectors
- C. Route the main harness through existing wire ties and then install two (2) new stick-on ties to FCC shield cage to hold harness securely
- D. Connect 4 pin sound and 6 pin video from monitor to main harness
- E. Connect 9 pin and 10 pin power supply connectors
- F. Fasten power supply harness to FCC shield cage with cable ties.
- G. Connect 44-pin edge connector to FCC cover assemble.

These steps are for Popeye, Donkey Kong and Donkey Kong Jr.

12. Connect new Donkey Kong 3 control panel to main harness and fasten down control panel (see illustration 3-3)

Note: For Donkey Kong and Donkey Kong Jr., use white connector on main harness only.

13. Install new Donkey Kong 3 front screen and fasten with front screen clamp

- A. **IMPORTANT! Place authorized Donkey Kong 3 sticker on front screen in location shown** (see illustration 3-3)

3-3

14. Screw on new serial number plate next to old plate.
IMPORTANT! Do not remove old plate
(see illustration 3-4)

- A. Use round head wood screw 3.5 x 3 provided.

3-4

15. Attach FCC Class A label (see illustration 3-5)

- A. Remove old FCC label
- B. Put on new FCC label and staple all four corners

Note: This step is not necessary for Popeye.

16. Attach FBI sticker

- A. Place label on back door just under lock (see illustration 3-6)
- B. Staple all four corners.

This step is for Donkey, Donkey Kong Jr., and Popeye.

17. Attach new back door adjustment label
 - A. Peel off old label and replace with new Donkey Kong 3 label.
Staple all four corners (see illustration 3-7)

Side Decal Application

Step 1.

Start by peeling the protective backing "A" down about 6 inches from the top.

Place decal in desired position. Pull down slowly the remainder of the protective backing of "A."

While doing this, use a soft cloth to smooth decal onto side board, moving from top to bottom of decal.

Step 2.

Fold remaining decal back, exposing the unprinted side. Begin to peel protective backing "B" from center to right hand side "slowly."

Using soft cloth smooth decal onto side panel by running hand from top to bottom of decal, moving outward to the right hand side.

ADJUSTMENTS

After powering up the game, you may find that the horizontal width and vertical height need adjustment. To make adjustment to the horizontal width, refer to the illustration on page 26. To adjust the vertical height, use the V-size adjustment on the rear of the monitor to make the picture larger.

It may also be necessary to adjust the vertical and horizontal position controls on the video p.c. board as shown below to center the picture.

P.C. Board Adjustments

Adjustment of Semi-Fixed Resistors

VIDEO P.C. Board

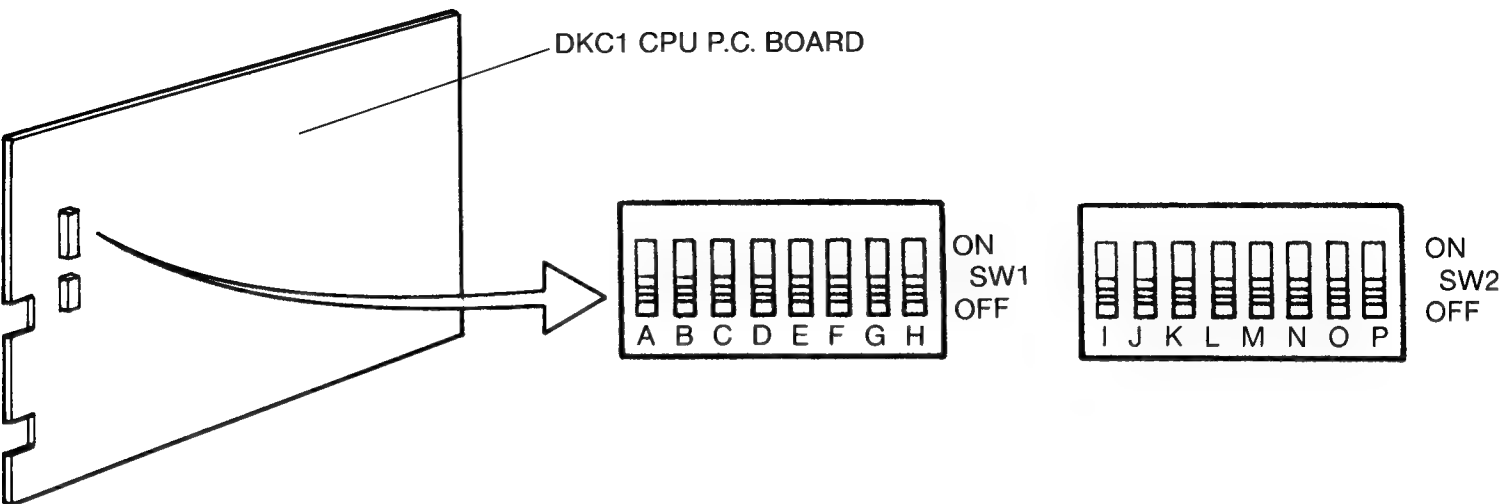

Semi-fixed resistors, VR1 and VR2 on VIDEO P.C. Board are used to adjust video monitor screen.

Adjustment of Horizontal Width

Caution! High Voltage Area — BE CAREFUL!

Using a standard 2.6mm hex non-conductive core alignment driver, carefully turn L453 counter-clockwise for a smaller horizontal screen size. L453 is located in the rear of the monitor just under the deflection yoke.

Adjustment of Video Monitor

Video Monitor

WARNING

Do not touch the inside of the Video Monitor.
It contains many parts supplied with high voltage.

Bookkeeping and Self-Test

(1) Entry

Press Service Switch and hold it down until Menu of Test Mode displays on the Video Monitor as follows.

(2) Selection of Test

A flashing Buzzbee points to the Test.

Momentarily depressing Service Switch will step to next Test. When the Buzzbee is pointing to the desired Test, the details of the Test can be displayed by pressing the Service Switch and holding it down until the details appear on the Video Monitor.

(Except "Return To Game Mode")

(3) Back to Menu of Test Mode

You can recall Menu of Test Mode by holding down Service Switch until it re-appears.

(4) Back to Game Mode

When the Buzzbee is pointing to "Return To Game Mode", you will be able to return to Game Mode (Demonstration Game) by holding down Service Switch until it re-appears.

(WARNING)

Test Mode will go back to Game Mode automatically if you do not push a switch or button or move the controller within a few minutes.

- A. Bookkeeping Distributions:
1. Playtime distributions and number of plays per distribution range.
 2. Score distributions and number of plays per distribution range.
 - * To clear all distributions, press either start button.
 - ** Bookkeeping distribution system will not function when game is set in Free Play Mode.
- B. Free-Play
Pressing either start button will set or clear "FREE PLAY" mode.
- C. Self-Test & Adjustment
Pressing either start button will step to the next Test.
- (C-1) RAM and ROM Test
The result of RAM and ROM Test will be displayed on the Video Monitor as follows.

Example

RAM ROM TEST				
RAM		ROM	CHECKSUM	
7F	OK	7B	OF	OK
7H	OK	7D	"	OK
		7E	"	OK
		7F	"	NG
RAM location on the PCB		ROM location on the PCB		

(OK: Passed)

(NG: Failed)

- C-2 CRT Test
Color Bar and Marks on four Corners and center of screen are displayed on the Video Monitor one after another.
- C-3 Sound Test
You will hear the various sounds one after another.
- C-4 Switch Test
The result of the switch condition will be displayed on the Video Monitor when you press each of the switches or move the controllers.
- C-5 End of Self-Test.

Maintenance

A. Fuse Replacement

This game contains 4 fuses. Replace fuses only with the same type as listed below.

Specification of Fuses

- | | |
|------------------------|----------------------|
| (1) Main Fuse U.S.: | 5A 125V (90-120V) |
| (2) Power Supply Fuse | 4A 125V |
| (3) Video Monitor Fuse | 4A 125V
0.3A 125V |

B. Cleaning

The exterior of the game, all metal parts and all plastic parts can be cleaned with a nonabrasive cleanser. You should be careful when cleaning the plastic parts. A dry cloth may cause scratches which will result in a foggy appearance.

Electrical Rating

- | | |
|------------|-----------|
| Voltage: | 120 (V) |
| Frequency: | 60 (HZ) |
| Wattage: | 120 (W) |
| Current: | 1.3 (AMP) |

Switch Maintenance

Micro-Switch Replacement

Whenever you replace any micro-switch on the Operation Panel, a switch gap adjustment is needed as shown below.

Lubrication for 2 way Controller

To maintain the 2 way Controller in good condition, lubricate the pillow balls and 2 way Guide Plate approx. every 3 months. See Fig. 9.

SERVICE DEPARTMENT

Dear Distributor:

In addition to the steps you have already done, we felt it would benefit your customers if the previous common problems were checked to ensure the modifications had been done. Below is the list of service bulletins which deal with these problems.

We have included copies of these service bulletins:

TKG-05	Slam Switch
DJR-01	Upper Coin Door Hinge
DJR-02	Model 730A Coin Selector
DJR-05	Video Wrap Around

Sincerely,

Nintendo of America Inc.

SERVICE DEPARTMENT

BULLETIN # TKG.05

GAME: Donkey Kong, Donkey Kong Junior, Popeye, Mario Bros.
Donkey Kong 3

SUBJECT: Slam Switch

In order to prevent the accumulation of free credits by kicking the coin door, a slam switch should be added.

In all cases the switch (a "normally open" weighted reed switch) should be mounted on the coin door. Connect one side of the slam switch to the brown wire on the coin switch (ground). The other side of the slam switch should be connected to a wire which will be run through the wiring harness to the CPU board. At this point the installations vary for the five (5) games.

Donkey Kong:

TKG2 and TKG3: Attach to Test Point 8, at board coordinates 3L.

TKG4: Attach to Test Point 2-RESET, at board coordinates 1L.

Donkey Kong Junior:

Attach to Test Point 2-RESET, at board coordinates 1L.

Popeye:

Attach to C13 (47 μ F electrolytic capacitor), "+" side, at board coordinates 2N.

Mario Bros.:

Attach to C38 (100 μ F electrolytic capacitor), "+" side, at board coordinates 4F.

Donkey Kong 3:

Attach to C25 (100 μ F electrolytic capacitor), "+" side, at board coordinates 2E.

BULLETIN # DJR-01

GAME: Donkey Kong Junior, Donkey Kong, Radar Scope

SUBJECT: Upper Coin Door Hinge

It has been brought to our attention that a flattened straw or similar object can be passed through the center opening in the upper hinge. If the object makes contact with the coin switch, it can be used to run up multiple credits.

The solution is to block the opening with a flange made of wood or metal. This flange should be mounted to the inside of the cabinet and can be obtained from us as a retrofit kit.

This problem is present in all Radar Scope uprights, Donkey Kong uprights and early Donkey Kong Junior uprights.

BULLETIN # DJR-02

GAME: Donkey Kong Junior
SUBJECT: Model #730A Coin Selector

It has come to our attention that there is a problem with the model #730A coin selector in that a nickel or a penny, if flipped through the entry just right, will continue through the mechanism and establish credits.

The solution to this problem is to add two small metal pieces to the selector as shown in the accompanying drawing. These pieces are available at no charge. The threaded holes in the selector is an M3 X 6MM size.

Nintendo

SERVICE DEPARTMENT

BULLETIN # DJR--05

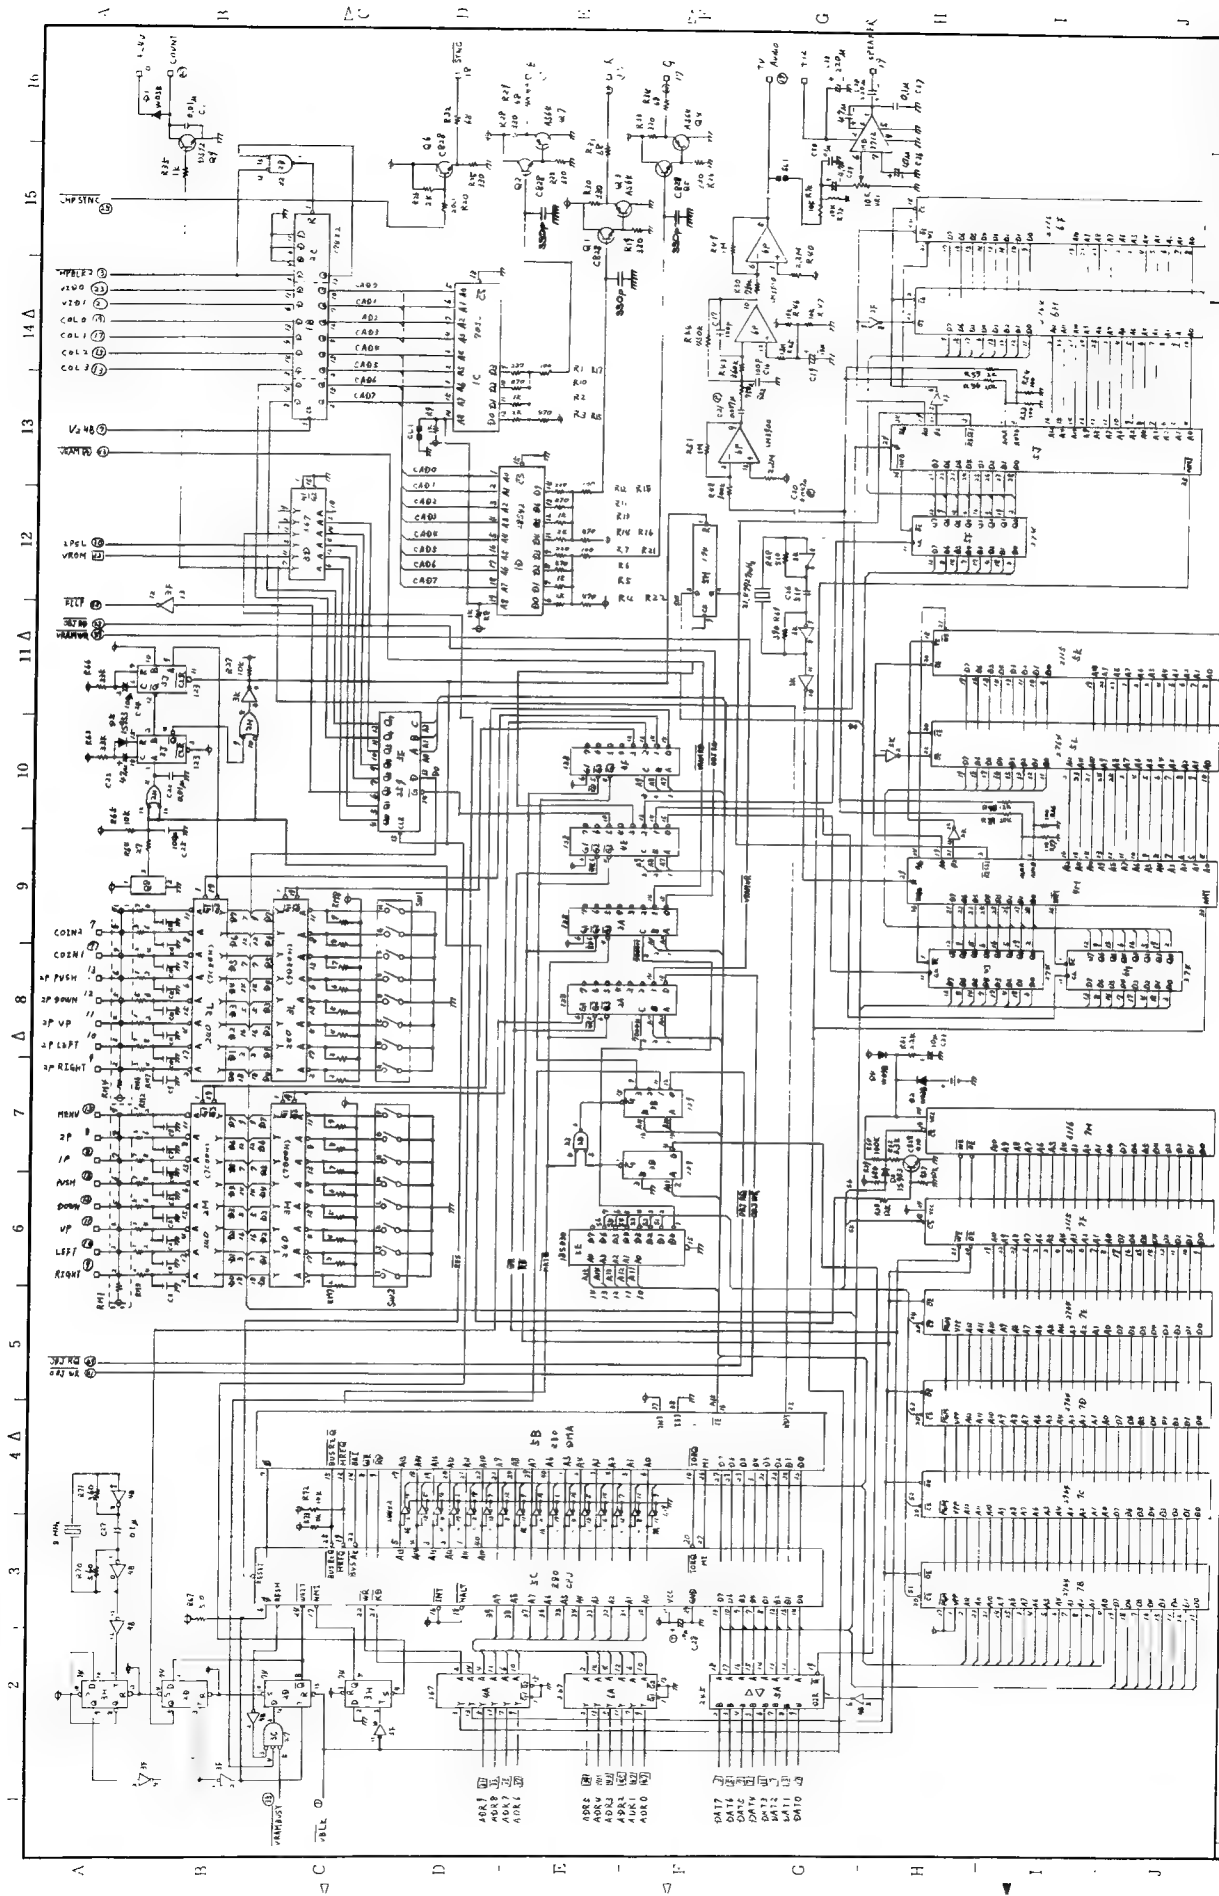

GAME: Donkey Kong, Donkey Kong Junior

SUBJECT: Video Wrap Around on Left Side of Picture

We have recently received a number of service calls concerning the wrap around or fold over of the picture on the left hand side of the monitor. In most cases the problem may be solved by replacing capacitor C407 on the main monitor PC board. This is located just to the left of the high voltage cage when viewing from the rear of the monitor. The value of this capacitor is 10 microfarads at 160 volts (of course, any capacitor of 10 microfarads with a voltage rating higher will work also).

This capacitor is connected between ground and the B+ supply for the vertical output transistors, so if this capacitor becomes leaky it does not allow full vertical deflection of the screen; consequently, you get video information imposed over the other (wrap around).

If you have questions about this or any other questions concerning Nintendo products, please feel free to contact us.

DKCU-25-51	20 Ohm 5W Resistor	(R9)
DKCU-25-52	510 Ohm 3W Resistor (Metal Oxide)	(R7)
DKCU-25-53	50K Ohm GP06P Variable Resistor	(VR2, VR4)
DKCU-25-54	2K Ohm GP06P Variable Resistor	(VR1, VR3)
DKCU-25-55	5m Ohm Shunt Resistor	(SH1, SH2)
DKCU-25-56	SC-02 SC Coil	(L1)
